PATENT PENDING

Hose-O prevents jobsite damage caused by the weight and movement of the pump hose. A round ring of lightweight, durable polyethylene foam, the Hose-O fits easily onto hoses from 2 to 4 inches in diameter.

The install/removal slit makes installing it around a hose quick and easy. Once installed, the hose sits as much as 4 inches off the ground, and the foam won't damage whatever surface it's resting on.

Place a Hose-O on the pour side of each clamp where you want protection. For extra protection, simply use more. If reducers are used, place a Hose-O on the hose ends at each end of the reducer.

The Hose-O is also ideal for water pump applications — it keeps hoses out of mud, damaging rocks and debris.

Easy To Install!

1. Lay out the delivery system (hoses/pipes) as you normally would to set up for the job.
2. Wherever protection from friction wear is desired, place a Hose-O upright under your delivery system with the install/removal slit facing up.
3. Remove the Strengthening Rod from the Hose-O.
4. Press your delivery system through the entry slit until it rests snugly in the interior hole of the Hose-O.
5. Insert the Strengthening Rod back into the side of the Hose-O.

Model	Fits this size hose:
HoseO 20	2"
HoseO 25	2½"
HoseO 30	3"
HoseO 40	4"
